Here are all the questions asked by the interviewer (**Anubhav**) in the interview transcript, categorized by topic:

1. Candidate Background & Role Alignment

- **Career Journey & JD Fit**: *"Tell me your story. Where do you start and what all you have learned, how you can help us... how it the job profile resonates with your personality, with your skills and expertise?"* 1

2. Identity Architecture, SSO & Identity Consolidation

- **Access Risk Reduction**: *"So tell me what it was about—just walk me through it like I'm a 4-year-old."* (Referring to the CV claim of reducing access-related risk by 70% through a phased identity risk program) 2.
- **Single Sign-On (SSO)**: *"Did they not have SSO?"* 3
- **SSO Tooling**: *"What were they using for SSO?"* 4
- **Identity Consolidation**: *"How did you bring those fragmented identities together is my question?"* / *"First explain to me how did you solve that problem of fragmented identities?"* 5
- **Prior State Architecture**: *"What was earlier the case?"* 6

3. Conditional Access & Legacy Estate Authentication

- **Impossible Travel Enforcement**: *"What did you do if there was an impossible travel kind of a situation? What was the effect of that conditional access policy?"* 7
- **Legacy Infrastructure**: *"What if the applications is on a legacy estate, hosted on-prem legacy infrastructure... how will you do that?"* 8
- **MFA for Legacy Systems**: *"Many legacy platforms or infrastructure do not support natively second factor of authentication. How will you achieve that in case that's the situation?"* 9, 10
- **Cloud Identity to On-Prem Apps**: *"Is there a way that your identity accounts are in Azure, but your application is on-prem?"* 11

4. Identity Risk Metrics & Account Governance

- **Risk Metric Validation**: *"How did you come to this figure 70%?"* 12
- **Stale & Orphan Accounts**: *"How did you understand which accounts were dormant and how did you trace ownership to orphan accounts?"* 13

5. Active Directory Internals & Domain Controller Authentication

- **Domain Controller Timestamps**: *"Assume there are six domain controllers in the enterprise. You want to know what time was the last logged-in timestamp for that user... Which domain controller do you think the user will have the latest timestamp?"* / *"Which domain controller is the most likely to be interacting with the user?"* 14-16
- **Non-On-Prem Auth Flow**: *"What if it's not an on-prem application?"* 17

6. Attack Path Analysis & Graph Tooling

- **Tier-0 Path Traversal**: *"With regards to attack path analysis, assume that I give read access to about 60,000 user hybrid estate for a week. How would you find the routes from an ordinary account to Tier 0, and how do you rank what to fix first?"* 18, 19
- **Hands-on Execution**: *"What I'm asking is how would you—if I put you in front of a PC—how would you do it? How would you tell me?"* 20
- **Specialized Graph Tools**: *"Have you worked on tools like BloodHound or PingCastle, etc.?"* 21

7. Detection Engineering & Microsoft Sentinel (SIEM/KQL)

- **Custom Analytics Rule Creation**: *"Tell me about a Sentinel rule that you created. How did you create it? What did you use to create it? What language did you use to create it? What kind of telemetry did it ingest or act upon, and what was the outcome?"* 21, 22

8. Advanced Threat Scenarios (MFA Token Theft)

- **Token Fishing / Proxy Interception**: *"Assume that the MFA user token is fished for a user through a proxy. How would you detect that? What kind of telemetry would you look at and from where will you get that telemetry?"* 23
- **Detection & SOAR Playbooks**: *"What kind of detection rule will you write to detect such a situation, and if I had to write a playbook or a rulebook in Sentinel, what would it do?"* 24

9. AI Security & Agentic Governance

- **AI-to-AI Trust Architecture**: *"Regarding the statement around AI-to-AI trust and context-aware authorization policy as code... what is it that you built and run yourself, perhaps in a lab environment or whatever?"* 25
- **Multi-Hop Context Preservation**: *"What about a situation where an agent talks to one agent, that agent talks to another agent, that agent talks to another agent... 4 or 5 hops. Do you think the context that begins from the first agent is preserved till the end?"* 26, 27

10. Closing

- **Candidate Questions**: *"Do you have any questions for me?"* 28

💡 Would you like an architectural analysis evaluating where the candidate's responses were strong vs. where they missed technical depth in this interview?
